SPECIALIZATION

Design of mechanics of sensors, vehicles, and platforms, including but not limited to pressure housing design, static and dynamic seals, high and low pressure fluid transfer, vacuum systems, fixturing (optical, electrical, mechanical), cable splicing, power and data transmission, and overall system layout. Design process contributions from mechanical and system level design to full project management involving the operation and enhancement of autonomous platforms. This includes engineering support on multiple AUV, ROV, Buoy, and towed platform deployments and operations locally and abroad. Current research is focused on managing USF's underwater glider fleet and combining new towed video methods with acoustic biomass technology and mapping sonars for fisheries stock assessment. Prior to work at USF, designed luxury yachts and specialty water craft for theme parks such as Disney World and Universal Studios.

Ocean Technology, St.Petersburg, Florida

Assistant in Research, Project Engineer, University of South Florida Center for Ocean Technology, St. Petersburg, Florida

Mechanical Design Engineer, Specialty and Luxury Watercraft, David Jones and Associates, Pinellas Park, Florida

COMMITTEE APPOINTMENTS
IOOS National Underwater Glider Plan Steering Committee (2012 - 2014)
GCOOS

August ■

December 1997
